

The HEAT solution enables delivery businesses advanced productivity and insight into their on-road performance and liability.

HEAT Telematics Unit

Provides vehicle positioning and monitoring along with wireless connectivity for persistent communication to vehicle.

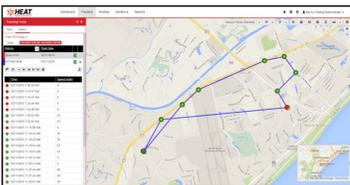

HEAT Provided Garmin FMI Device

Navigation device providing direction to driver—enables live updates from dispatcher and two-way text communications.

HEAT Provided Cellular Service

Over-the-air connectivity between vehicles and the HEATTrack platform.

HEATTrack Enterprise Platform

Provides real-time fleet visibility along with routing and dispatch capabilities. Enables complete vehicle and driver logging.

KEY BENEFITS

- ✧ Simple to use interface
- ✧ Efficient for the workforce
- ✧ Increased productivity
- ✧ E-log compliance
- ✧ Improve your bottom line
- ✧ Scalable to all fleet sizes

WHAT ARE THE KEY PROBLEMS FACING YOUR FLEET?

- Responding to real time demand
- Evolving route lists
- Insight to vehicle location
- Operational costs (fuel, wear/tear)
- Access to driver
- Complying with federal regulations

HEATTRACK AND DISPATCH PUTS YOU ON TRACK

The HEATTrack and Dispatch solution combines a powerful platform with superior cellular service and hardware components to provide fleet operators the ability to gain real-time control over their most valuable assets. Our solution enables operators to:

- ✧ Gather real-time GPS location information on active vehicles
- ✧ Manage and update driver routes remotely
- ✧ Comply with the FMCSA requirements for Hours of Service (HOS)

Our system also provides operators with a singular database to keep track of all vehicle and driver insurance information, emergency contacts, expiry dates and maintenance schedules. Utilizing our advanced maintenance monitoring component, operators can receive proactive notifications for required maintenance or service faults which will contribute to optimizing uptime and productivity.

Read on to learn more specifically how HEAT can help you **Cover Your Assets!**

A powerful fleet communication and control tool

FEATURES

Alert Popup

Send alerts to drivers from your central office that popup on the display

Stop Messages

Display a list of stops or “jobs” that have been sent to the device. Find this list under “My Stops”. Stops can include instructions for drivers.

Custom Forms

Create custom forms with user-defined fields to capture data at the point of delivery.

Road Segment Avoidance

Your dispatcher can notify your fleet about particular roads, or sections of roads, to avoid.

Auto-Arrival at Stop

The system will automatically identify a defined “Stop”. The driver can then indicate if the Stop is complete and proceed to the next Stop.

Canned Messages & Responses

Managers can configure up to 120 canned messages to be stored on the system for drivers to quickly respond to incoming messages and requests without creating distraction.

Status

Real time communications that allow drivers to automatically send status updates.

Dispatcher Prescribed Routing

Integrated with HEATTrack’s Dispatch Module, you can send predefined Stop routes to the driver.

Text Messages

You can communicate with your driver from your office by sending text messages to be displayed (when stopped) on the display.

ETA

Your dispatch team will receive ETA notifications of current Stops in progress.

Driver Identification

Keep track of who is in which vehicle at any time. Drivers login before starting their day. Compliance with federally mandated E-log.

Hours of Service (HOS)

Meet the federal mandate for E-log by gathering all required data for Automated On-Board Recording Devices (AOBRD).

Speed Monitoring & Alerts

With our optional speed limit integration, our system will dynamically compare travel speed against posted speed limits.

Using a HEAT provided GPS asset tracking device in conjunction with a Garmin FMI-enabled display and the HEATTrack tracking and dispatch software, fleet managers can optimize the control over their fleet and comply with the federal regulations regarding E-logging.

This complete solution enables significant benefits to fleet managers as it allows for complete control over daily routes, on-the-fly route modification, safe and effective two-way driver communication and up-to-the-minute status reports.

Hours of service and driver identification are tracked and viewable to be completely compliant with all federal regulations.

HEAT’s business operations and support team provide behind the scenes maximized uptimes and insight into fleet optimization—resulting in faster dispatches, quicker service times, and profitable fleet operations.
